## Zagaia have 3 Projects approved for Efforts Embedded competition

**two projects are games and one is a music focused.**

**Zagaia Team**  
Manaus

The mobile application development competition Efforts Embedded is being organized for Embedded System Labs and Pervasive Computing, from the Federal University of Campina Grande with the support from INdT and Fórum Nokia Fórum.

The competition aims the development and the dissemination of technologies related to mobile and pervasive computer systems. The Projects on the competition have specific development technologies for Nokia cell phones or internet tablets.

Acting on this segment the zagaia project, was created from the partnership between INdT and FUCAPI, have three projects participating on Efforts competition, and two of them are games and the third is a music focused application. One game of the games is an accelerometer based application for Sybiam plataform, the other game explores the touchscreen for gaming, and the third project virtualizes a jukebox using a PC administrator that distribute music streamings for UPNP clients.

The best projects of the competition will participate in world competition through Embedded Labs. To know more about the competition, visit: [Efforts.Embedded](#)
